

LAPAROSCOPIC CHOLECYSTECTOMY WORKSHOP 2024

Hospital Sultan Ismail

Towards A Vision of Zero Bile duct Injury

Mastering laparoscopic cholecystectomy is a crucial milestone for surgeons advancing from trainees to skilled general surgeons. For junior surgeons, this procedure marks an entry into a challenging yet exhilarating field of surgical expertise, filled with anticipation, excitement, and a touch of apprehension.

To Promote Culture of Safe Laparoscopic Cholecystectomy

Surgical Department of Hospital Sultan Ismail (HSI) together with Hepatopancreaticobiliary Unit of Hospital Sultanah Aminah (HSA) led by Ms Kharlina, Mr Jonathan Tan and Mr Shaiful Amir organized a two-day workshop on July 29th and 30th, 2024 at HSI.

About Workshop

Day one laid the theoretical groundwork, with discussions and didactic sessions rounding out this foundational day.

Building on this knowledge base, the second day transitioned to practical application. In a closely supervised environment, trainees put theory into practice, performing laparoscopic cholecystectomies.

Under the watchful eyes of experienced instructors, the group successfully completed 7 of these procedures. This practical session allowed participants to immediately apply their newly reinforced knowledge, bridging the gap between theory and surgical technique.

Towards A Vision of Zero Bile Duct Injury

Laparoscopic Cholecystectomy Workshop HSI 2024

This is Not the End..

This event successfully bridged the gap between theoretical knowledge and practical skills, and we look forward to it serving as a model for future training programs in the Southern region of Peninsular Malaysia.
